Marker State: 1

Marker Color: Red

Description: An photo has been uploaded in the map by a normal_user and the location of the photo upload has been marked Red at the map.

Backend: A new job has been created at the location of the photo upload. Notification is sent to all the service provider of the sector inside which the location falls.

Notification: A new job is available. Accept the job?

New Job created at table "Jobs".

```
jobs.key = 0  
jobs.state = 1  
jobs.created_by = user_id of the user  
who uploaded the photo to the map  
jobs.accepted_by = NULL
```

A new Marker has been created on the location of upload inside the table "Marker".

```
marker.state = 1  
append the uploaded image at  
marker.image_array[]  
marker.key = 0
```

New notification has been added to the table "Notification".

```
notification.target = service_provider (all  
with the same sector as the location)  
notification.state = 1  
notification.recipient_id = NULL  
notification.key = 0
```

Add a red marker to the map frontend. Upon clicking the marker, a popup menu should open displaying the uploaded image.

Marker and image visibility/accessibility: to everyone

Marker State: 2
Marker Color: Orange
Description: A service_provider has accepted the job request.
Backend: The service_providers of that sector is notified about the closing of the job.
Notification: The job at location {{location}} has been accepted by user {{user}}.

```
jobs.state = 2
jobs.accepted_by = user_id of the
service_provider who accepted the job
request.

marker.state = 2

New notification has been added to the
table "Notification".
notification.state = 2
notification.target = service_provider (all
with the same sector as the location)
notification.recipient_id = user_id of the
service_provider who accepted the job
request.
notification.key = 1

Delete the previous notification (when
Marker Status was 1) from database.
```

Replace the red marker with an orange marker to the map frontend.

Marker State: 3

Marker Color: Yellow

Description: The service_provider who accepted the job request has reached the location and uploaded a photo (on the same location) as a proof that they've started working.

Backend: The normal_user who uploaded the job has been notified about the beginning of work.

Notification: The work at location `{{location}}` has been started by user `{{user}}`.

```
jobs.state = 3

marker.state = 3
append the new uploaded image at
marker.image_array[]

New notification has been added to the
table "Notification".
notification.state = 2
notification.target = normal_user who
uploaded the job to the map
notification.recipient_id = NULL
notification.key = 1
```

Replace the orange marker with a yellow marker to the map frontend.
Now the popup menu should include the newly uploaded image too, as the array of two images.

Marker State: 4
Marker Color: Green
Description: The job has been completed and the service_provider has uploaded a photo of the completed job at the same location.
Backend: The job has been marked as done, and a notification to the normal_user who uploaded the job has been sent.
Notification: The job at location {{location}} has been completed by user {{user}}. Rate their work.

```
jobs.state = 4
jobs.key = 1

marker.state = 4
append the new uploaded image at
marker.image_array[]
marker.key = 1
```

New notification has been added to the table "Notification".

```
notification.state = 2
notification.target = normal_user who
uploaded the job to the map
notification.recipient_id = normal_user
who uploaded the job to the map
notification.key = 1
```

Replace the yellow marker with a green marker to the map frontend.
Display the array of three images in the popup menu.
